Motivation Letter

Dear Team!

I love Animation, and am also passionate about new things to come in technology. We are living really exciting times of discovery!

I applied to your offer to express my interest in contributing my own talents and skills because I have a wide experience as 3D Generalist & Motion Graphics. I have a positive attitude listening, learning, and also love sharing great and crazy ideas!

My last project involved animating Meta Humans through Unreal 5 and Rokoko Smartsuit II + Smartgloves and Face Capture. I'm also familiar with iClone and Character Creator.

Good practices and strong work ethics are part of my personal life rules. I'm a person with a problem solver attitude, super organized and I can work alone, but I also love being part of a team.

I love the science behind the psychology, to help create believable characters.

I'm interested in everything that allows me to grow as an Animator and as an Artist, I love those projects where I can contribute and find solutions through creativity.

Thank you in advance!
